DAY : 02

Technical workflow for e-commerce website:

Tools and frameworks:

Front-end: Next.js for fast and responsive UI.

Back-end: Sanity for data stroage and CMS.

APIs: External APIs for product data.

PAGES:

1. Home page

2. Shop page

3. Contact page

4. Cart page

5. Checkout page

6. SingleProduct page

WORKFLOW OF MY WEBSITE:

Home page → When a user scrolls down, it's id is sent and through this id, products are displayed

Our latest products

Shop page

If a user clicks on a specific product, it will lead them to the products page

SingleProduct page

If a user wants to add that product to cart, "add to cart button" will lead them to cart page

Cart page → **Checkout page**

If a user wants to proceed with the payment then they click on "checkout"
